28 Principles of Remote Sensing ELECTROMAGNETIC RADIATION AND THE ELECTROMAGNETIC SPECTRUM EMR is a dynamic form of energy that propagates as wave motion at a velocity of  $c = 3 \times 10^{10}$  cm/sec. The parameters that characterize a wave motion are

A railgun is a device that uses electromagnetic force to launch high velocity projectiles, by means of a sliding armature that is accelerated along a pair of conductive rails. It is typically constructed as a weapon, and the projectile normally does not contain explosives, relying on the projectile's high speed to inflict damage.

### **Railgun - Wikipedia**

A transformer is a static electrical device that transfers electrical energy between two or more circuits. A varying current in one coil of the transformer produces a varying magnetic flux, which, in turn, induces a varying electromotive force across a second coil wound around the same core. Electrical energy can be transferred between the two coils, without a metallic connection between the ...

US Electromagnetic Weapons and Human Rights By Peter Phillips, Lew Brown and Bridget Thornton. This research explores the current capabilities of the US military to use electromagnetic (EMF) devices to harass, intimidate, and kill individuals and the continuing possibilities of violations of human rights by the testing and deployment of these weapons.
