Manifolds, Tensors, and Forms: An Introduction for

Informally, a manifold is a space that is "modeled on" Euclidean space.. There are many different kinds of manifolds, depending on the context. In geometry and topology, all manifolds are topological manifolds, possibly with additional structure, such as a differentiable structure. A manifold can be constructed by giving a collection of coordinate charts, that is a covering by open sets with ...

Possibly a more apt subtitle for this book would be "A First Introduction to Ideas that Underlie Category Theory." Even after spending quite a bit of time with this book, I didn't really feel like I'd learned much category theory, per se. (Tom Leinster's Basic Category Theory seems like an excellent choice if you want to jump right into definitions of categories, functors and natural ...

Introduction. The fundamental theorem of calculus states that the integral of a function f over the interval $[a, b]$ can be calculated by finding an antiderivative F of f : $\int_a^b f(x) dx = F(b) - F(a)$. Stokes' theorem is a vast generalization of this theorem in the following sense. By the choice of F , $dF / dx = f(x)$. In the parlance of differential forms, this is saying that $f(x) dx$ is the exterior derivative ...
