For regions 1, 2, 3 and 5 the authors of IAPWS-IF97 have developed fundamental equations of very high accuracy. Regions 1, 2 and 5 are covered by fundamental equations for the Gibbs free energy  $g(T,p)$ , region 3 by a fundamental equation for the Helmholtz free energy  $f(T,v)$ . All thermodynamic properties can then be calculated from these fundamental equations by using the appropriate ...

## Thermodynamic and Transport Properties of Water and Steam

In other industrial applications steam is used for energy storage, which is introduced and extracted by heat transfer, usually through pipes. Steam is a capacious reservoir for thermal energy because of water's high heat of vaporization.. Fireless steam locomotives were steam locomotives that operated from a supply of steam stored on board in a large tank resembling a conventional locomotive's ...

Course overview. Chemical engineers take science out of the laboratory and into the real world. They turn raw materials into useful products through changing their properties or changing how their properties interact with each other.
